zipPay/zipMoney – Magento integration guide

Contents

1. Overview

There are a number of sections that must be integrated for this to be considered a complete integration. Please make sure they are all in working order prior to going live, and reach out to the zipMoney integration team if you have any questions.

The steps in this document utilize the zipMoney QuickStart method to complete a successful implementation. With the QuickStart method, zipMoney handles the majority of the development work while our tools integrate seamlessly with your website. A typical QuickStart implementation consists of the following tasks:

1. **Enabling and configuring the zipMoney payment method:**
   - Activate the zipMoney payment method in Magento.
2. **Implementing the marketing and display features, which consists of the following subtasks:**
   - Adding the zipMoney homepage Banner.
   - Implementing a landing page with the zipMoney content.
   - Adding a link to the zipMoney landing page in the header and footer.

You can rely upon the zipMoney implementation team to provide detailed guidance and support for each step in the implementation process. If you have questions about the integration, contact the zipMoney integration team or your sales representative.

2. Enabling the zipPay/zipMoney payment

2.1. Plugin Installation

Our plugin can be integrated via Magento Connect or via deploy process (github, composers etc.).

Follow these steps to install the plugin via Magento Connect:

1. In the Magento admin dashboard, navigate to **Systems -> Magento Connect Manager**.
2. Upload the plugin provided by your zipMoney and return to admin. zipMoney will now be a payment method.

2.2. Payment method configuration

1. Navigate to **Systems -> configuration** and then locate the **Payment Method** section in the left menu to access the zipMoney payment method.
2. Fill in your **Merchant ID** (also called zipMoney ID) and **Merchant Key** (also called API signature) provided by the zipMoney team.
3. Enable the payment method by selected Enabled = Yes.
4. Select the environment that you are integrating with.

Note: While this is not too common, some merchants choose to test the integration against the zipMoney sandbox/test environment. The **Test Environment** option must only be used in conjunction with sanbox credentials (Merchant ID, Merchant Key). Please request those if they have not been supplied.

5. Enable *Express Checkout*.
6. *iframe checkout* option should be enabled for zipPay only.

7. Choose the sections that you want the zipMoney or zipPay widgets to be displayed on.

Note: The repayment calculator option is available for zipPay accounts only. If you are using a zipMoney account, the repayment calculator widget will not be displayed even if you select the option.
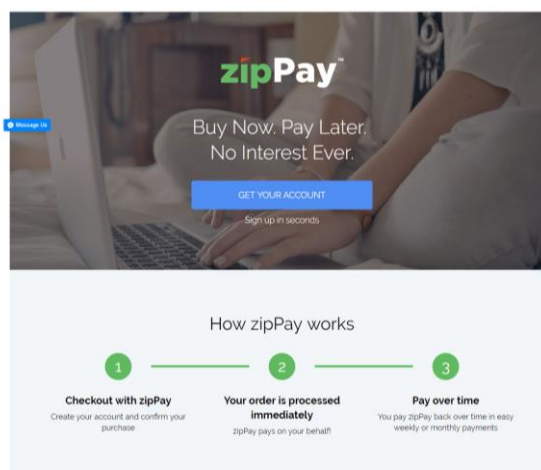

1. Save your changes.
2. At this point, the zip payment method should be active and available in your website.

💡 Check if the zip widgets are being displayed properly in the product and cart page and adjust the style if needed.
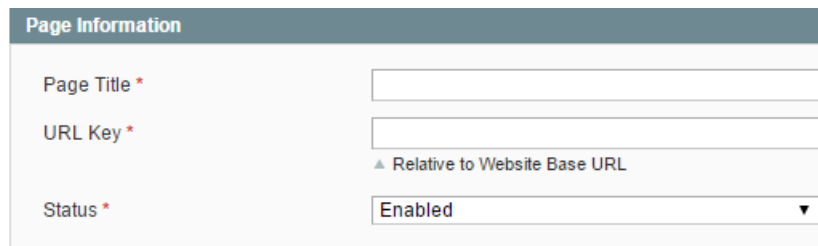

3. Implementing a zipPay/zipMoney landing page

3.1. Creating a zipPay/zipMoney landing page

Create a friendly landing page (static web page) on your Magento store to allow visitors to activate their shopping accounts. Great for converting browsers to buyers.

1. In the Magento admin dashboard, navigate to *CMS -> Pages*.
2. Click on the **Add New Page** button.

3. Enter **Title** value *Buy Now, Pay Later*.
4. Enter zipPay or zipMoney as URL key depending on the zip product your account is using.
5. Edit the content section by selecting the HTML view in the content editor.
6. Enter "Buy Now Pay Later" in content heading.

7. Place the following code into the html view.

```
<script type="text/javascript" src="https://d3k1w8lx8mqizo.cloudfront.net/lib/js/zm-widget-
js/dist/zipmoney-widgets-v1.min.js"></script>
<div id="zip-landing-page" data-zm-asset="landingpage" data-zm-widget="inline" data-zm-popup-
asset="termsdialog"></div>
<div style="text-align: center;">Learn about how you can buy now and pay later with <a
href="http://www.zippay.com.au" title="Buy Now, and Pay Later with zipPay">zipPay</a></div>
```

Note: Adjust the url and message of the link depending on the zip product you are integrating. If you are using zipMoney, update the link to http://www.zipmoney.com.au

8. Click on the *Update* button.
9. Save the Page.

3.2.   Adding the landing page to your website menus

Once you have created the landing page as described in the previous section, make sure you add links to this page in your header and/or footer and any other zipMoney/zipPay marketing content that you add to your site, i.e banners, icons.

4. Adding footer links and zip payment icon

Ensure that you create a link to the landing page specified in [3.1] in the footer of every page of your website. This helps drive awareness, and converts browsers to shoppers.

Ensure that you place the zip payment acceptance mark / icon alongside those of the other payment methods you accept, in your footer. Link the image to https://zippay.com.au

Use the following code to add the zipPay icon.

```
<a href="http://www.zippay.com.au" target="_blank">
<img src="https://d3k1w8lx8mqizo.cloudfront.net/INTEGRATIONS/2016/zippay/payment-icons/zip-
paycon-80x50.png" style="height:32px"></a>
```

Notes:
- Change the value of the *height* style property to adjust the size of the zipPay icon if required.
- You can access the zipPay marketing assets folder or zipMoney marketing assets folder to choose the image that matches your payment icons.

5. Go Live Checklist

Please ensure you tick each item off in the go-live checklist, below.

Once complete - notify your dedicated sales engineer for signoff.

ID	Checklist Item	Done
1.	Payment method selection page presents zipPay/zipMoney as a payment option.	
2.	A banner has been placed on the homepage promoting the zip product with which you are integrated.	
3.	A landing page has been created.	
4.	Links have been placed in both header and footer to the landing page.	
5.	Acceptance mark for zip has been added to the footer of your pages alongside existing payment icons.	
6.	The Product widget has been placed on the product page	
7.	The Cart widget has been placed on the cart page	
8	Supply us with a white version of your logo on a transparent BG for our zipStores page
